Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2, are rejected under 35 U.S.C 102(b) as being anticipated by Hiroaki (US PAT: 5,786,846).

Regarding claim 1, Hiroaki discloses a picture-phone device for an operator to exchange images and voices with the party on the other end via a communication circuit comprising: an imaging portion (602, fig. 6) and image display portion (603, fig. 6), wherein means (102, fig. 6) for guiding the line of sight for guiding the operator's line of sight to a specific direction is provided (col. 13 lines 29-67, col. 14 lines 1-26).

Regarding claim 2, Hiroaki further teaches the following: means for guiding the line of sight provides indicating means therein for giving indications with respect to the operator for guiding the line of sight (fig. 10, col. 14 lines 27-43).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Art Unit: 2643

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hiroaki in view of Ota (JP363276352A).

Regarding claim 3, Hiroaki teaches control means (102, fig. 8) for controlling indicating means (502, fig. 8) in response to the result of the determination of the phone in use which is implicit (col. 13 lines 42-55); but he does not explicitly teach the following: determining whether the phone is in use or not according to a voice input signal output from a microphone.

However, Ota discloses automatic voice dial telephone terminal equipment which teaches determining whether the phone is in use or not according to a voice input signal output from a microphone (see abstract).

Thus, it would have been obvious to one of ordinary skill in the art at the time invention was made to modify Hiroaki's system to provide for determining whether the phone is in use or not according to a voice input signal output from a microphone as this would provide another means to determine phone in use.

Regarding claims 4-7, Ota further teaches the following: indicating means is a light flashing system for guiding the caller's line of sight by light emission, light flashing system is provided near the imaging portion (col. 9 lines 35-42), indicating means is a caption outputting system for projecting a special visual image in order to guide the caller's line of sight to a specific direction on the image display portion in the picture phone device (col. 14 lines 46-57), special

Art Unit: 2643

visual image is an arrow for pointing the position where the imaging portion is installed (figs. 13A/13B, col. 15 lines 53-56, col. 16 lines 19-23).
